A developers dream (and fortune)

By CHARLES STEVENS

What happens when a large state institution, such as The Evergreen State College, is landed in the middle of a quiet, undeveloped countryside, such as the Cooper Point peninsula? One consequence, students of the Environmental Design program working with the Cooper Point Association have found, is that land speculators and potential developers are attracted like honey bees to a clover field. There is big money to be had in the development game and the bees are attracted from many different hives around the state and from as far away as Florida. Many present land and home owners are sorely tempted to cash in their clover for a bit of the honey. Others find that their property taxes have escalated beyond their means to hold on to their land, and they feel forced to sell.

A vital concern of the Cooper Point Association in this area is to work with identifiable and potential developers, and out of this concern the CPA has formed a developers involvement committee.

A major function of the committee is to create a liaison with the developers in the area and to assure them that these developers' plans are consistent with the desires of the residents. Henry Sharper, the committee chairman, remarked at Tuesday's meeting of the general membership that ideally the dialogue between committee and developer would take the form of a "meeting of the minds." He noted that it was not the Association's aim to encourage and work with developers in making the Point a desirable area to live in.

The committee has been meeting with members of College Park Associates, who are planning for the extensive development of a 100-acre site just south of the east wing of the campus off of Overloon Road. Commenting on the preliminary site plan presented to the committee by College Park, the Association's full-time planner, Russ Fox, emphasized that the concepts proposed by College Park in their development plans are basically consistent with the aims of the Association. There include a cluster housing concept (a more efficient use of land), a neighborhood commercial area (serving primarily the residents of the development), and a large amount of land devoted to open space.

Two major areas of concern still trouble members of the developers involvement committee, though. One is that they feel that the large scale of development proposed by College Park (for commercial use 20 acres) is not justified by the needs of the potential residents of the development. The other concern is how to assure that the concepts outlined and agreed upon by both parties will be safeguarded by any future action. In other words, what guarantee is there that the developers will not redesign their whole development without citizen involvement or control?

The developers involvement committee will meet again with the developers of College Park and hash out these concerns. The hope is that both parties can go before the February 24 Planning Commission public hearings on College Park's rezoning request offering a unified stance.

The work of the developers involvement committee, although crucial, is but one aspect of the functioning of the whole Cooper Point Association. If you are interested in working with this or any other facet of the planning process for the area, contact the Environmental Design program.

Tuition, housing increase next fall

By BRUCE BROCKMANN

There will be an increase in tuition and fees along with housing increases for next year according to Dean Clabough, vice president for business.

Tuition beginning Fall quarter, 1972 will be $65 a quarter for resident students, an increase from $419. The changes are based on the actions of the 1971 Legislature which provided for a two-step increase for resident students rates, the first of which has been implemented this year.

Nonresident tuition will not change. There was also a two-step increase for non-residents but the first of this two-step arrangement was not implemented this year because there were no continuing non-resident students.

The changes pertain only to those resident students who are not affected by the Vietnam veteran freeze. For Vietnam veterans the tuition will remain at $120 per quarter. Part time tuition will increase from $105 to $135 per quarter next year.

Housing rates will be changed next fall in two fashions. The first involves an addition of a fourth step to our previous three-step rate, the fourth step specifically designed for the modular units. The spread from highest to the lowest rate will be $6.00, contrasted with the $4.00 spread this year. An increase of tax and one-third cent per pound will be instituted.

Three elements contribute to the increases in rate. The first is telephone service. The housing rates for this year were based upon service not including telephones. When it was discovered how much it would cost to have students go directly to Pacific Northwest Bell telephone for service the telephones were included in the housing package.

An increase in the costs of operation and maintenance costs, due to inflationary pressures and the bond covenants the college signed to finance the modular units are the two other elements for the increase in housing for next year.

Food service rates have not yet been set, pending the renewal of a food contract with ARA-Slater. The rate could possibly be higher or lower according to Clabough.

Legislative report

By XEN WALSLEY

Our legislature has been very busy as they fast approach their deadline. All of the following measures of tremendous importance have passed either one or both chambers and should have a great impact on our state.

From the House came a bill to allow homeowners the right to burn leaves and branches in their backyard. Other bills passed exempt hot water tanks from inspection, and sugar beets in transit from the property tax.

Certain left turns over a double yellow line would be permitted under a bill passed by the house. They also changed hearing procedures in mosquito control districts and made it a crime to put ale, porter or beer into a kid belonging to someone else.

The state Senate has been far from idle. Although they have passed fewer bills than the House, such momentous measures as changing the way embryo examinations are administered, allowing public employees to set up tax deferred annuities, juggling harbor lines at Port Orchard get around state regulations, and exempting vehicle borne campers from taxes have all passed.

Perhaps the most important bill to have passed our legislature this session makes it a crime to steal someone's dog or cat.

Feb. 2 was the cutoff date for each house to consider its own bills. All measures not voted on and passed to the other chamber by that date are dead, except those dealing with appropriations. At once legislation started looking around for ways of attaching money riders to their pet bills to keep them alive.

Some bills of interest to members of the Evergreen community are still alive although not completely healthy. SB135, the 30 year old drink bill is still surviving, but just barely, in the Senate Rules Committee, having had an appropriation rider attached to it. SB 128, denying liquor licenses to clubs that discriminate is also still alive, with a money bill attached. But it hasn't moved an inch and is still being lashed in Senator Mardenich's Commerce Committee. The hitchhiking bill has passed the Senate and has been sent to the Governor for his approval. It would allow hitchhiking in certain areas designated by signs.

Very much alive and in danger of being passed are the measures removing restrictions from ATV's and the anti-rock festival bills.

Initiative petitions to remove all criminal penalties for the possession of Marijuana are now available at the Olympia Food Co-op at 607 N. Central. This initiative needs the signatures of 39,000 registered voters before it can be put on the November General Election Ballot. Perhaps you will want to add your name although personally I am somewhat reluctant when all possible future implications are considered, if this initiative doesn't pass.

There still may be time to speak out for or against those bills for which you have strong feelings. But the time to do so is now, not later. There may be no later.
Two University of Washington faculty members, a journalism professor and a communications law specialist, have written a book to help reporters and editors develop a better understanding of libel law. The book, "Communicators to treat libel journalism law," was published by the Seattle U of W School of Journalism and Communication. The book, "Communicators to treat libel journalism law," is regarded as a "comer" in his specialty. **Members of The Paper, who are donating its communicators' ... in the library building for a location of a coffeehouse.** The contract between the college and the ARA-Slater Company not only states this point but also brings into light others that haven't yet been considered. Namely, that the "Deli" or Retail Food Store, is not a student owned or run store, it is under the management and administration of the ARA-Slater Company, and that the college, now that there are now the 199 persons on the food plan, must pay the ARA-Slater Company for all direct costs, including a 6% operations and administration fee, and a 5% service fee. So in essence the college is paying for the ARA-Slater operations plus 11% of its operations cost. The ARA-Slater operations plus 11% of its operations cost. The coffeehouse point, also taken care of within this agreement, gives the ARA-Slater Company the exclusive right to not only purchase but also prepare and dispense all candy, tobacco, tobacco, cigarettes, food products, and non-alcoholic beverages in the TAC food service facilities. This control that the ARA-Slater Company now has over the Library building also extends to the S&A building and any other place of food distribution on the Evergreen Campus. The book, "Communicators to treat libel journalism law," is regarded as a "comer" in his specialty. **Members of The Paper, who are donating its communicators' vast, will host the Feb. 29 evening session.** They see the Tuesday program as a "highly useful" one and invite everyone interested in an objective and responsible communications medium to attend. Professor Johnson has suggested that participants go ahead of time the definitive book on libel, Paul Ashley's, "Say Safely," which is required reading for UW journalism courses. T ertaed the Seattle U of W school of journalism, a "working handbook, organized to give the essence of libel law before it is planed and constantly up-reachings which he hasn't filtered through the laws of court yet." The Tuesday evening program was arranged to provide evergreen students, newspaper professionals as a place possible for operation. **NEW YORK (N.L.) - When Cap- tured two pirate ships December, which had been involved in anti-Cuban activities ever since the Bay of Pigs, the U.S. government started screaming.** But the outlaws failed to mention that the U.S. has seized 264 Cuban vessels, abducted personnel, and even purchased mercenaries onto Cuban fuel from the victory of the Cuban Revolution in 1959 up until 1977 alone. **Design students plan Lacey park** A innovative group of Evergreen's Environmental Design students are designing plans for a new Lacey Park. Students submitted the bid for designing the park, drawing plans for the cost of materials. The proposed design for the 23-acre park near Lark Street was submitted to the Lacey Park Commission. The commission forwarded the design to the Lacey/City Council who accepted the design. The final park plans will be done by June 1. Designs for the park follow the Environmental Design program's concept that in planning and designing, the physical limitations of nature and man are considered. Students are working to create a balance between the land's natural state and the park's development. Their ecological approach will follow many of the concepts in Ian L. McHarg's book, "Design With Nature." Surveys and research will determine the types of uses the land can tolerate, the needs of Lacey area residents, park needs at the park site, and access routes to the park. Future land development near the park site will be considered as will the impact of the expanding population upon the park, and the estimated costs constructing the park. Students participating in the study have experience in surveying, land use studies, botanical studies, sedimentary surveys, trail building, drafting construction work, photographic skills and engineering. Among the Environmental Design students working on the Lacey Park plans are: Larry Ha-Di Meyer, John Paul Jone Tyler Robinson, Jim Zito, Thomas, Scott Aspin, Philip Bridges, Diane Snell and K. Flack. Persons interested in helping with the Lacey Park project may contact any of the above students or Environment Design Professor Arnold J. Kravitz.
Demo party reform

Because of recent reforms in the structure of the Democratic Party at the national level, registered voters who declare themselves to be Democrats can now have a greater voice in determining who the Democratic Presidential nominee will be.

Meanwhile, in Washington, delegates are elected in a process that begins in your local neighborhood or precinct. On March 7, 1972, at 8 p.m., precinct caucuses will be held all over the state.

Issues will be discussed and you will be able to elect delegates to the district or county convention. Delegates from the larger counties which have been divided into legislative districts.

The district or county conventions then elect delegates to the state convention. The state convention then elects delegates to the Democratic National Convention.

In the seven congressional districts in Washington, which will also elect between five and eight delegates to the national convention. This will be done by the state delegates before the state convention. The state convention also adopts a party platform and sets party policy governing the next four years.

These reforms were meant to make the Democratic National Convention more open and representative. But for this to occur you must get involved.

If you are interested in participating in the March 7 precinct caucuses get in touch with the local Democratic Party headquarters.

Evergreen's budget approved by House

The House of Representatives has approved a supplementary budget for the balance of the 1972-73 biennium, according to Rep. Dick Nicholas, Director of Information Services, and Dean Cline, Vice-president. The amount approved includes additional funding for TESC at the level requested by Governor Forth and his Office of Program Planning and Fiscal Management, plus a three percent across-the-board pay increase. The budget has now moved to the Senate Ways and Means Committee. If a different version of supplementary state spending is drafted there and approved by the Senate, the entire budget document would go to a conference committee, as in the past.

The governor has recommended the House has approved supplementary funding for Evergreen. For educational purposes $415,313 and an enrollment of 17,530 students. For capital purposes $8,287,531, which includes: $2,690,000, Seminar Building; $5,053,406, Laboratory Building, Phase II; $2,529,266, Service Road; and $284,865, College Parkway.

The seminar building, phase I, includes space for administrative offices, seminar and study lounges and on the fourth floor space for music and dance.

The new section of the laboratory building would provide additional space to the kinds of spaces now being built. Both phase (1 and 11) include office and seminar space.

Funds for the service road mentioned would allow for construction of a vital link between the modulars and the shops and garages at the east end of the campus. Parkway funding would allow clearing, grading and rough grading of the section. Tying the existing roadway to the new section being built from the Aberdeen-Olympia Freeway to the southern edge of the campus.

Family planning at TESC

Informational sessions for the Family Planning Clinic, which will be arriving on the TESC campus within the next two weeks, are a MUST for anyone wanting examinations, according to volunteer Janet Harrison. She noted that these educational sessions are necessary previous to the examinations, as it is a part of the program which is sponsored by the Thurston County Health Department and will be operating through TESC's Nurse's office.

Although present the planning clinic is open in Olympia every Thursday night, it will be coming to Evergreen about once a month to hand out an inventory of 20 patients per night. Ms. Sheridan noted, "Family Planning is coming to Evergreen to provide a needed service. Most large universities have such programs and Evergreen is fortunate to be able to acquire it. This program is for anyone who needs or wants it."

She also noted, "There is no need to be apprehensive of your visit. A typical patient is just asked for a sex history, is instructed in the educational aspects of all contraceptive methods, and then given a physical examination by a physician."

The program has also expressed a need for volunteer administrative assistance. All interested parties should contact the TESC Nurse, Edwina Dorsey, in Library room 616 or at 753-3176 for the dates of the program meetings.

Trustees to decide on future housing

By BRUCE BROCKMANN

The question of additional student housing, when and where, will be under discussion. Several items discussed at the March 9 meeting of TESC's board of trustees.

Trustees resolved no decision on the proposed resolution approving construction of a non-profit ASH (Adult Student Housing) project near the campus at the Feb. 3 meeting. The trustees directed college staff members to investigate the matter and report back at the March 9 meeting.

There were assurances that the proposed ASH project, if approved, can be ready by next fall because of the now very tight construction schedule. It is also uncertain, at this point, whether Evergreen will build new student units east of the current ones if the ASH project doesn't materialize.

Facilities Planning had developed plans for more modular units in tandem with the original Parkside project, with that idea falling through and the ASH project uncertain, Evergreen's possible further movement into the housing business (and the resulting drain on campus capacity) still remains a question.

Other items included in the March 9 agenda include a presentation from Evergreen's minority students and a report and discussion on Evergreen's new communication medium "The Paper."

Any proposal's good?

A continuing series of articles on the actions of the Student Fees Hearing Board

By HARLEY C. MUGROVE

The Service and Activities Board, formed within The Evergreen State College, to perform the task of allocating the Service and Activities money, has heard all but three of the proposals that they have received to date. They have heard a total of 32 proposals. Of these 32 proposals the board has taken definitive action on over one half of them, and have allocated $23,500.

One of the more interesting and unusual proposals that has been received and approved by this board is the proposal received from Glen Olson. His proposal asked for $9,000 of S.A.A. funds for a typewriter, records, and film, $2,500 of S.A.A. funds for a typewriter, records, and film, and $2,000 for a typewriter, records, and film, and $2,000 for the production of a ten minute film.

The proposal, if passed, would be used to produce a picture to be shown on the two learning institutions at which he is now doing an internship. These two institutions are the Peninsula School Ltd. in Mealoa, California, and Stanford University, at which he is attending seminars in early childhood learning under the direction of Dr. Carol Peterson.

There are two proposals for a type of poetry and graphic presentation. Both of these proposals are rejected at this time but will be acted upon as soon as the board feels that they have enough information to qualify the use of S.A.A. funds.

Another of the more interesting proposals which is incidentally tabled at this time, is

The mark Munick proposal. This proposal asks for the original $37,000 of S.A.A. funds to be provided, and that $25 of this per student be used. This proposal was submitted by a group of students for projects in which he is interested. I.e, Organic Farm, Judo Club, Chamber Singers, etc.

There has also been a proposal for a fraternity. In fact, The Alpha Alpha Fraternity. This proposal is in the process of being allocated. 

6 mm Optical Printer, allocated S100
MICHIDA, allocated $3,000
Glen Olson, allocated $100
Karl Oakley, denied
Newspaper, allocated $2,500
Donald Howard Award, allocated $25
Chamber Singers, allocated $300
Jazz Ensemble, allocated $165
Indian Center, allocated $1,000
Transcript/Portfolio Duplication, tabbed
Faith Center, allocated $750
Ball Bond, illegal Multimedia Presentation, permanently tabbed
Judo Club, allocated $466
Black Student Union, allocated $325
Visiting Photographer's Program, allocated $700
Outdoor Activities, allocated $2,000
Slide-Tape Film on Evergreen, allocated $329
Teletype Communications Network, allocated $20

The proposals that have yet to be decided are on: Poetry Anthology, Used Truck, Oracle Exhibitions, Fraternity, Office of Cooperative Education, EEC Machine, Day Care Center, and Film of Delight.

A copy of these proposals as they are presented to the S.A.A. Board are in the Information Center in the Library. Any personal feelings about these proposals should be given to one of the S.A.A. Board members.
VIEWPOINT

Conformity at Evergreen?

By TIM MOFFATT
Reference Assistant, TESC Library

How many of you read Don Martin's Viewpoint article in the last issue of The Paper? How many of you are still thinking about it? I am. I came here when this whole place was little more than a few people, an already scarred landscape, and a mandate from the legislature to build a new kind of undergraduate college in Washington. A year and a half has passed since then. So have a lot of meetings, committees, D.T.P.'s. A lot of people have come to birth, been transformed, misplaced or forgotten. Everyone had ideals, maybe too many, maybe too few. And... almost all of us were somewhere in between. Some of us were there in those mad, confusing times are still idealistic. Others have become cynical, bitter about the sham this place has become in so short a time. I personally felt somewhere in between. I have seen the crunching weight of bureaucracy, of mystical, inexorable "givens" fall as idea after idea, hope after hope were thoughtlessly destroyed, through tragic ignorance. How can we talk to the community about ecology when we are creating the greatest physical disaster Cooper Point has ever endured. How can we talk about social reform when our health services, our counseling services, our crisis, overdose, and endless other services are invariably on the bottom of the financial agenda?

The answer lies in first recognizing that far more than the physical buildings are unsuited to our needs, and ultimately to the needs of the community. The board of trustees reflects a miniscule cross-section of Washington's population, namely the moneyed, successful east coast establishment. The administration is typical of those at countless other, more traditional institutions across the country. Their moral attitudes are the same, if their rhetoric is a little different, they are largely unready, or unable to fully adjust to the real change this college must represent if it is to justify itself to the people of this state. How many hassles have we all endured from campus services, always under the cloak of O.P.P. & F.M., or some other mystic, non-euphemistic euphemism?

How many people have come up against Facilities Planning, even for a simple request? Why was the library, theoretically at the center of this campus, and the object of massive spending, the last, and still not quite ready, part of the campus to become operational?

Evergreen is in danger of becoming a free university created in its midst. Isn't that tragic, since it is to be a sort of "free university" to begin with? It is simple enough to sit back and ignore what is happening, and most of us have been content that. The whole college reinforces that, in spite of endless rhetoric to the contrary. Maybe some of us have never known anything else. I have, for Evergreen is a relative utopia. I played poker to two different colleges in California and I went out of this. This is upside down, and it's going to stay that way until we get off our asses and deal with the problem before it gets even more out of hand.

Did you know that the administration is considering the addition of a graduate program leading to a masters degree in public affairs administration? How does that line up with our "communistic" orientation to undergraduate learning? Can you imagine the isolation, which Mr. Martin pointed out so well, when this place has 8000, or 20,000 students? How does that differ from the conditions that led to the Free Speech Movement at Berkeley?

This place has rhetoric up the wrong end. But so far it hasn't got much else. There are a few people, staff, faculty, and students, who have worked to make something out of this place. It would be so great. But the administration isn't going to make it that way, all the fees aren't going to put their asses on the line; maybe most of us would rather slide along with them... through...what in the hell did we come here for it we're just going to "get through it"? Written work, book reports, pop quizzes, roll call attendance are at Evergreen. Tell me how you like the administration of the register and the director of admissions, asking for the "real" grades you wouldn't've gotten even if you hadn't entered into grad school. They don't even have enough guts to defend what they built. These things are already happening in individual programs. We can't fire all these people. We are F.T.E.'s not enfranchised citizens of the Evergreen community. Maybe we can't change them. Do we therefore have to submit to bullshit, let the whole thing die? This place isn't going to fail because of malice. Administrators I think would deep down like to make this place swing. So would we. But there are enough to show it, loudy, and often. Apathy is what's done to it. Fight that, and we can change things. We're not bothering them. How do you fight apathy? There are a lot of ways: Sing out loud in the main lobby. Drop in and chat with Charles Morgan. Get involved in the poker with John Moss. Test the limit of every policy that someone else besides you set. Plant trees where they're not supposed to be. No parking lot. Refuse to attend seminars in a cold, impersonal cubicle. Visit seminars in another program. Ask, propose, discuss, but if you're right and you know it, just do it. Form car pools. Boycott food services. If you're right, just do it. It's not just a nurse. Don't wait to organize. If you're doing it, your brothers and sisters will join you. We are not alone in our own little playground on Cooper Point without even worrying about it. Our Community will form naturally at Evergreen when we find each other fighting the same shit. Maybe you'll find unexpected allies. Maybe unexpected enemies too. This place doesn't need a free y. It can still be one, I'm ready.

Concerning Angela Davis

By DAVID MCNALLY and THOMAS ALLEN

There is only one survivor of the San Rafael courthouse battle of August 7, 1970 which led to the indictment of Professor Angela Davis. He is Rachel Magee. In November of 1970, Magee alleges, his court-appointed lawyer, Leonard Bjorklund, entered his San Quentin jail cell and offered to have the charges against him of murder, kidnap and complicity dropped if he would testify that Angela Davis had supplied him with a gun on or about August 7, the date of the San Rafael shootout. Magee refused and threw Bjorklund out of his cell. This highlighted exposure of the injustice, which placed Miss Davis behind bars, provoked public demand for an explanation as to why she has been imprisoned without bail. Professor Davis is charged with murder, kidnap and complicity which resulted in the death of a Marin County, California judge. She is imprisoned in a 6' by 9' cell. She smoked four packs of cigarettes daily and preparin defense. When time permits she works on a paper for the American Philosophical Association. While in prison she contracted a deadly infection which spread to every part of her body. It was two months after her doctor detected this ailment she was finally allowed the medicine necessary for treatment. She has lost 30 pounds and her eyesight has deteriorated to the point where she didn't recognize her own mother. According to her physician, Tobert J. Smith, her prescriptions have been lost, forgotten and neglected so that generally it has taken several weeks to have basic medicines supplied. Lower parts of her legs have been burned with irritants or combustions. For the first five months of her imprisonment Miss Davis had no hot water, although all the other cells did. Public response has helped somewhat to improve the living conditions in recent months.

According to California State Law Professor Davis is guilty of murder if she knew of or in any way assisted 17 year old Jonathan Jackson's desperate kidnap attempt. She was in evidence with which the prosecution is going to attempt to put Angela to death amounts to little more than a stringing together of perfectly legal events. Miss Davis was working on the defense case of the Soledad Brothers. She was interrogated on their behalf with Jonathan Jackson. Due to threats against her life, she purchased gun over a two year period before the courthouse incident. Finally, she bought a ticket and left San Francisco for Los Angeles after the shootout.

Indeed, as Anthony University, the noted professor and controversial Black University Law School said, "California court has ever sustained a conviction on evidence obtained from defendants present in the grand jury indictment of Angela Davis. Why has Professor Davis been denied bail? California Penal Code No.1270 states "IN ALL CASES WHERE IT IS IMPOSSIBLE TO MAINTAIN BAIL WITHOUT THE ACCUSED BEING EXCEPTABLE IN CAPITAL CASES IN THOSE WHERE A RISK OF INJURY TO THE PRESENTMENT OF THE EVIDENCEが多く EIGHT YEARS THORETHER IS GREAT." Therefore, denial of bail is the exception rather than the rule. Furthermore, Angela meets all the legal criteria for bail. She has no previous police record. She can demonstrate her stability; she has several offers of employment while in prison. Her probation officer has stated that she feels she will not flee and therefore, to me, there can only be the greatest denial of equal protection under the law when Miss Davis has been denied bail and Lieutenant William Call, convicted of the murder of more than a score of Vietnamese civilians, is released to his own quarters while appealing that conviction. The nổiing American Shirley Chisholm says, "Angela Davis is being denied bail for the reason that she is Black, a militant for peace, an avowed member of the Communist Party." These do not make Professor Davis a political fram-up. Indeed, the facts justify this conclusion. Ms. Davis is willing to circulate petitions, write letters, or just want more information about the Angela Davis case, she is willing to talk to you (Human Development) 753-4773 or 753-4567 or Thomas Allen (CAMS) 753-3849 or 753-3199. We urgently need assistance.
Towing unfair!

To "The Paper": In the towing incident which just happened to involve the Black Students at The Evergreen State College, which was totally misconstrued by the Sheriff of Thurston County, the Daily Olympic, President Charles McCann and those persons involved. I would like to ask first of all on this particular morning the only five black students on campus with vehicles happened to be parked in the no parking zone, why on this morning of all days did security call for tow trucks to impound these cars before students could wake up and move them?

Dorm madness

To "The Paper": At midnight they moved the Video tap into building B (Boogie Hall). They were exterred and having someone yelled down from the fourth floor, "For God's sake be quiet I'm trying to sleep!"

Evergreen's admission policy...

By KEN BALSLEY

The Evergreen State College is only as good as the faculty they hire and the students they admit. While faculty hiring has been running fairly smooth, some questions have been raised recently concerning Evergreen's admission policy. It has been pointed out in the Evergreen Catalog that students admitted to TESC would not be judged on educational level, cultural background, or financial status of their parents. But rather they would be judged solely on what they could contribute to the total learning experience of the Evergreen Community. This is not turning out to be the case.

We are all aware that in a group learning situation such as ours, it is imperative that students and teachers be of varied backgrounds, with different experiences and different outlooks towards life. In order to learn from people, there must be disagreement so that there can be give and take. If everyone agreed completely, there could be no growth. When everyone is of the same viewpoint, we are not learning. This is just where Evergreen is headed.

If a composite picture of the Evergreen Student Body could be made up it would look something like this: Young, White, Middle Class, with a Drug Cultural background. He would be made with long hair and an anti-establishment, anti-intellectual outlook.

Such is not the case with the world as a whole and the country in general.

It is easy here at Evergreen to be smug, content, and comfortable with the knowledge that your views on life won't be severely challenged; that overall your outlook on the world situation will be agreed with. If your statements on the deterioration of life are attacked, it is very comforting to know that hundreds of people will jump to your defense. We have created our own little world.

Those people that disagree with this outlook are being made to feel belittled and unwanted, They are being forced to drop out. But what is worse is that they are not being admitted in the first place in any significant numbers.

The argument has been made that Evergreen appeals to the conservative student, those with druidian and a puritan ethic background. I can only answer that No, it doesn't. But shouldn't it? I feel that Evergreen is doing just that, but instead of converted, it is a disservice by not exposing members to those viewpoints. That if those viewpoints are wrong, they are only going to be changed by logical rational arguments presented in a climate of give and take. That if those viewpoints are right, then they should become known in a climate of compromise.

February 18, 1972 THE EVERGREEN STATE COLLEGE PAGE 5
Puget Sound under consideration

The Puget Sound Section of the Marine Technology Society will host the first annual Pacific Rim conference at the Eames Theater, Pacific Science Center, in Seattle on February 25-26. The event immediately follows another marine affair in the city, the oil spill symposium at the Olympic Hotel on February 23-24.

MTS members from 6 other west coast (Hawaii to British Columbia) will join the local group, college and university faculty and students, federal and state representatives, and the interested public to consider "The Marine Environment and High Education." 

"Exhibits by colleges and universities in Western Washington will illustrate the variety and depth of marine educational programs in the state," said Richard Haagen, conference program chairman. "The conference begins at 9 a.m. Friday with a summary of these programs. Students in marine programs at these community colleges are being excused from classes to attend the meeting as part of National Vocational Education Week." 

Next a team of speakers headed by Dr. John P. Crowe, Marine Affairs Coordinator, Hawaii, will discuss "Floating Structures for Breakwaters, Piles, Bridges, and Habitation."

In the Afternoon, Dr. Robert Bash, and Dr. Brian Murray of the University of Washington, Dr. Robert Warren of the University of California and James Walsh of Washington's Attorney General's office will discuss various aspects of "Social and Economic Consequences of Marine Development in the Puget Sound Region."

"Saturday's sessions are devoted entirely to aquaculture," said van Haagen. "Our speakers were chosen not only for their expertise but also because it is probable the bill will be passed by the Senate. If passed, the bill would go into effect 90 days after the close of the special legislative session. If students have met the residency requirements under the existing law, they will still be eligible to become reclassified as state residents. HB 467 would not be retroactive."

Montecucco added that an out-of-state student must live in the state for 12 consecutive months before claiming residency. HB 467 also stipulates that any period during which the non-resident student is enrolled in more than six (quarter) credit hours will not apply toward the residency requirement. 

Food stamp regulations tighten up

Because of new regulations which go into effect March 1, students who receive federal food stamps should check to see if they are still eligible for the program.

According to the Department of Social and Health Services only people who are living together and are related, either by blood or legal relationship by law, or living alone, are eligible for the food stamp program.

The law, which was passed about a year ago, affects the total program since "people will now be able to pay less and get more." Sources noted that if students' parents declare them dependent, the children are not eligible for food stamps.

Applying for food stamps remains the same. Applications may be made at County offices in South Sound by appointment. Applications for food stamps are made each month and, if the requirements are met, food stamps will be issued.
Volunteers to grow

By DIANE SENN

Volunteer spirit in the United States dates back to early American history. President John F. Kennedy stimulated volunteerism with his 1961 "Million Man March". "Ask not what your country can do for you, but ask what you can do for your country!" President Richard Nixon's recently enacted ACTION program provides support on the national level to volunteer service programs.

Encouraging the volunteer spirit at Evergreen is the Office of Cooperative Education directed by Ken Donohue. Working with Donohue are Jim Long, Coordinator of Volunteer Services and Dave Calif, Coordinator of Cooperative Education. The office has placed over 100 student volunteers in off-campus volunteer positions.

How can the volunteer meet the needs of the individual or group he is helping? How can students find a place in the community where they can be of help? There are a few questions that must be answered in placing students in volunteer jobs.

Students are working with senior citizens of Olympia, Melodi Cottineng, of the Space, Time and Form program designed a program in which student volunteers make telephone calls to senior citizens who live alone. If the senior citizen does not answer, the call is repeated one-half hour later.

If the person cannot be reached a relative or friend of the senior citizen is notified. This calling system gives the older people a chance to talk to someone during the day. It helps relieve the isolated feeling and the boredom that often accompany old age. The system also assures them that help will come if they are in trouble and not able to answer the telephone.

Among the other places students are helping off-campus are: Morningide, Neighbors in Need, The Department of Public Assistance, serving in state government, youth camps, and various elementary and secondary schools.

On-campus volunteer organizations include: The Everday People, The Organic Farm, Draft Counseling, Faith Center, The Evergreen College Community Organization, and the Cooper Point Association. The CPA involves cooperation between the Cooper Point area residents, Evergreen students and other concerned Olympia-area residents.

TESC students are working in the community and members of the Olympia-area community are volunteering to help Evergreen. Among the volunteers coming onto the campus are: secretaries in the financial aid and placement office, library helpers and a program that trains campus tour guides.

"Volunteerism is a two-way street," explains Jim Long. He emphasizes the value of exchange of communication between Olympia community members and TESC students. As Olympia residents volunteer at Evergreen in addition to helping the college, they learn how the college community functions.

College students working in the community learn how businesses operate, how state programs function, how to organize and establish their own volunteer services.

"Volunteer programs at TESC will grow as students want to get involved in volunteer activities," Jim stresses. "Management and direction are necessary for successful programs."

A volunteer program in the idea stage is a "Call for Action" organization, similar to radio KING's "Call for Action" group. People interested in this program may call Jim Long or Dave Calif at 753-3959. People may also stop by Jim's office in L-3254, or Dave's office in L-3222.

Ecotactics*

This is the first in a series of articles suggesting how you can help save the earth's resources.

By DIANE SENN

Ecotactics - organizing all available forces against the enemies of the earth.

Air pollution - Instead of driving, take or walk around campus to decrease automobile exhaust fumes in the air. Organize car pools to-and-from campus. Avoid smoking in crowded or closed areas. Other smokers as well as non-smokers often complain of the suffocating.

Water pollution and conservation: Use organic dish soaps, laundry soaps and bath soaps. Recently manufacturers are indicating on the labels that their product contains no phosphates. To save water, put bricks in the water tank so that you use less water when flushed. When brushing teeth avoid leaving the water running.

Soil pollution - Avoid littering; even those "tiny" cigarette butts. A lot of cigarette butts thrown out car windows onto the streets creates an awful sight.

Body pollution - Avoid buying processed foods. Much of the nutrition in food is lost in over-processing. Most prepared foods contain mainly starch and sugar which are not basic nutrients. Stick to meats, fruits, vegetables, lots of water, and try making your own wheat bread. When you cook for yourself you'll find that you're not adding and then eating all the preservatives found in processed foods.

General pollution - Try recycling your clothes instead of throwing them away. Patch jeans, shirts, with colorful material scraps, washable feather patches, out in sponges, hearts, flowers.

Avoid using electrical appliances whenever possible, such as electric toothbrushes, brushing, curling knives. Save electricity and use TESC's teams in place of the elevators.

Conserv paper products by using as little possible of paper towels, toilet paper, plastic wrap, aluminum foil. With paper to manufacturers who use too much paper in packaging their products. Suggest that they use less plastic, paper and boxes in packaging.

You can write to the following organizations to receive further information concerning ecotactics:

Movie reviews

By FRANKIE FOSTER AND PAM ALEXANDER
SOMETIMES A GREAT NOTION Director: Paul Newman. Produced by: Universal-Newman-Foreman Productions, Inc. starring: Paul Newman, Lee Remick, Henry Fonda and Michael Sarrazin. Based on the novel by Ken Kesey. In printing Sometime a Great Notion it helps to separate yourself from Ken Kesey’s novel. Kesey is the author, but apparently not Paul Newman is a director. The film has a lot of real Oregon, deep down, black dirt and Olive Beer cans. It also has diverse themes and concerns. It seems to introduce the ‘‘magic of the great Northwest’’ together with the much expounded ideas on quality of existence. Newman attempts to say many things—all too obvious in their cinematic content.

Nothing is subtle, though it all is confusing. War and violence, the role of women, long hair, ecological conservation and the American tradition of blood and guts competition are all there for you to witness in the Stanford logging family whose motto is ‘‘never give an inch.’’ Their daily lives consist of eating, drinking, logging, sawing, at the grandad of the family (who else but Henry Fonda) mints it up. Newman says there is more to life or is it saying that perseverance, at any cost, is the answer? He does not make this clear. At the end everyone does what he/she must do despite it all. Perhaps there is no question and no answer.

Paul Newman’s direction includes one good scene—the drug scene in which his brother (Newman) himself in his usual ‘‘typical’’ role. Henry Fonda does his best to swear largely. Sometimes a Great Notion lacks the depth, visual composition, and power that good cinema can give you. It is not worth your money but interesting at least in two aspects: It presents a confusing insight into Newman’s increasing political awareness.

A picture of the Northwest atmosphere, it is scary but subjective in the validity of the stereotyped producers.

STRAW DOGS opens on a high angle camera looking down on school children playing in a village greyout in England. The ringing of the Church bells matches the closeup photo of the young faces. The theme of continuity throughout STRAW DOGS of innocence and stronger forces.

Hoffman is editing especially good during the scenes of sexual and physical violence forming a montage in the musical, rhythmic and dramatic elements of the film.

STRAW DOGS is an intense and unsmiling experience. It says nothing new. The direction attempts to catch the flavor and closeness of the relationship between the English villagers but misses. Dustin Hoffman is a mathematician, wears wire rim, white tennis shoes, a pullower, smokes cigarette, a practical, college, young student. Susan George is the stereotype of a petty, sassy, English girl. They give an interesting but ‘‘been before’’ experience. If you like sex and violence go see it—but don’t buy stock of the
