

we are also given:

$$\mathcal{E}_{\text{ox}} + \mathcal{E}_{\text{red}} = 1.247\text{V}$$

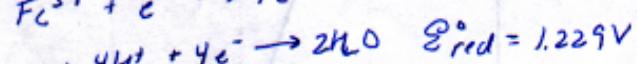

$$\mathcal{E}_{\text{red}} = 1.247\text{V} - 0.447\text{V} = 0.800\text{V}$$

$$\Delta G^\circ = -nF(E_{\text{red}}^\circ + E_{\text{ox}}^\circ) = -nFE_{\text{red}}^\circ + -nFE_{\text{ox}}^\circ$$

$$\text{so } \Delta G^\circ = \Delta G_{\text{red}}^\circ + \Delta G_{\text{ox}}^\circ$$

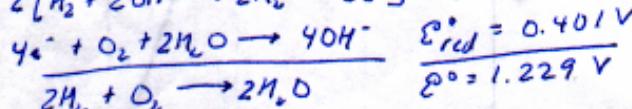

17.14 look up potentials:

$$\mathcal{E}_{\text{rxn}}^\circ = \mathcal{E}_{\text{ox}}^\circ + \mathcal{E}_{\text{red}}^\circ = 1.229\text{V} - 0.770\text{V} = 0.459\text{V}$$

$$\Delta G^\circ = -nFE_{\text{rxn}}^\circ = -4\text{mole e}^- \times \frac{96485\text{C}}{\text{mole e}^-} \times \frac{0.459\text{J}}{\text{C}} = -1.77 \times 10^5\text{J}$$

so spontaneous

$$\mathcal{E}^\circ = 1.229\text{V}$$

$$\Delta G^\circ = -nFE^\circ$$

$$= -4\text{mole e}^- \times \frac{96485\text{C}}{\text{mole e}^-} \times \frac{1.229\text{V}}{\text{C}}$$

$$= -4.743 \times 10^5\text{J}$$

so spontaneous
