

to make your corners precise: notice that the tab you cut off has two 45 degree angles

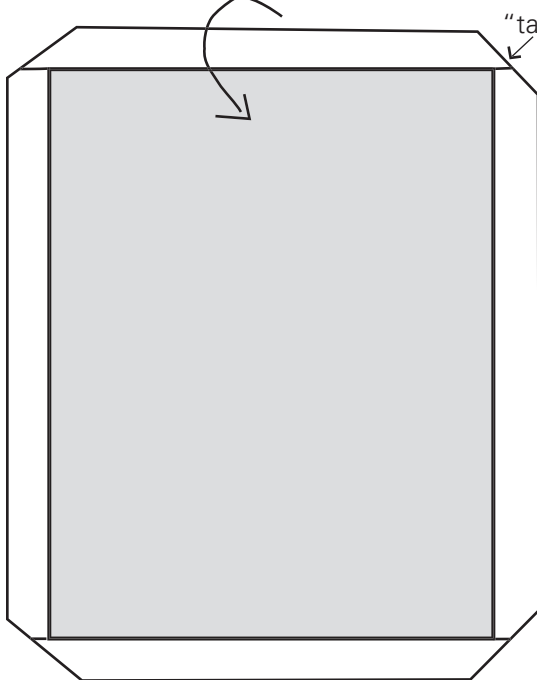

the gap between the cut you make and the corner of the board should be just slightly greater than the thickness of the board.

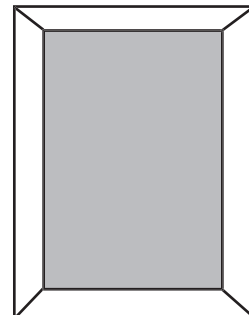

next, make four parallel cuts toward the corners of the board.

fold over and paste the two sides with tabs; use your bone folder to smooth down the edges and corners

fold the tabs in so that they cover the pokey corners of the board.

once the top and bottom have been folded in and the tabs have been folded and pasted over the corners, fold the sides over, smooth the edges...

the remaining exposed board can now be covered by a simple rectangle of paper. you may want to wait until you have attached the board to the book block before you finish the inside cover.
