## **2 Virus Cultivation, Detection, and Genetics 26**

### **Introduction 27**

### **Cultivation of Viruses 27**

- Cell Culture 27
- Embryonated Eggs 30
- Laboratory Animals 30

### **Detection of Viruses in the Host 31**

- Measurement of Infectious Units 31
- Measurement of Virus Particles and Their Components 35
- The One-Step Growth Cycle 44

### **Genetic Analysis of Viruses 46**

- Classical Genetic Methods 46
- Engineering Mutations into Viral Genomes 49
- Genetic Interference by Double-Stranded RNA 56
- Engineering Viral Genomes: Viral Vectors 56

### **Perspectives 61**

### **References 61**

---

## ***II* Molecular Biology 63**

### **3 Genomes 64**

#### **Introduction 65**

#### **Genome Principles and the Baltimore System 65**

#### **Structure and Complexity of Viral Genomes 66**

- DNA Genomes 69
- RNA Genomes 70

#### **What Do Viral Genomes Look Like in the Virus? 73**

#### **Coding Strategies 73**

#### **What Can Viral Sequences Tell Us? 73**

#### **The “Big and Small” of Viral Genomes: Does Size Matter? 78**

#### **How To Use This New Classification 79**

#### **References 80**

### **4 Structure 82**

#### **Introduction 83**

- Functions of the Virion 83
- Nomenclature 84
- Methods for Studying Virus Structure 84

#### **Building a Protective Coat 91**

- Helical Structures 91
- Capsids or Nucleocapsids with Icosahedral Symmetry 93
- Complex Viruses 109

#### **Packaging the Nucleic Acid Genome 109**

- Direct Contact of the Genome with a Protein Shell 109
- Packaging by Specialized Virion Proteins 112
- Packaging by Cellular Proteins 112

**Viruses with Envelopes 114**

Viral Envelope Components 114

Simple Enveloped Viruses: Direct Contact of External Proteins with the Capsid or Nucleocapsid 116

Enveloped Viruses with One or Two Additional Protein Layers 117

**Other Components of Virions 121**

Virion Enzymes 121

Other Viral Proteins 121

Nongenomic Viral Nucleic Acid 121

**Cellular Macromolecules 123****Perspectives 123****References 124****5 Attachment and Entry 126** ←**Introduction 127**

Protection and Release of Genetic Material 128

Finding the Right Cells To Infect 128

**The Architecture of Cell Surfaces 128**

Extracellular Matrix: Components and Biological Importance 129

Properties of the Plasma Membrane 131

Cell Membrane Proteins 135

**Interaction of Viruses with Cell Receptors 137**

General Principles 137

Identification of Viral Receptors on Cells 139

How Virions Attach to Receptors 147

**Uptake of Macromolecules by Cells 151**

Cell Membranes Fuse during Endocytosis 153

The Architecture of the Cytoskeleton 154

**Mechanisms of Entry 156**

Uncoating at the Plasma Membrane 156

Entry via the Endocytic Pathway 160

Entry of Nonenveloped Viruses into Cells 165

Cytoplasmic Transport during Entry 169

Cellular Molecules That Participate in Uncoating 170

**Transport of the Viral Genome into the Nucleus 172**

The Cellular Pathway of Protein Import into the Nucleus 172

Import of DNA Genomes 176

Import of Retroviral Genomes 176

Import of Influenza Virus RNP 176

**Perspectives 176****References 177****6 RNA Virus Genome Replication and mRNA Production 182****Introduction 183** ←**Mechanisms of Viral RNA Synthesis 186**

RNA-Dependent RNA Polymerases 186

The Nature of the RNA Template 189

## CONTENTS

- Accessory Proteins in RNA-Dependent RNA Synthesis 190
- Initiation and Elongation 195
- Cellular Sites of Viral RNA Synthesis 199
- Unique Mechanisms of mRNA and Genome Synthesis of the Hepatitis Delta Satellite Virus 202

### **The Switch from mRNA Production to Genome RNA Synthesis 204**

- Different RNA Polymerases for mRNA Synthesis and Genome Replication 204
- Suppression of Intergenic Stop-Start Reactions by Nucleocapsid Protein 206
- Suppression of Termination Induced by a Stem-Loop Structure 207
- Different Templates Used for mRNA Synthesis and Genome Replication 207
- Suppression of Polyadenylation 208

### **Origins of Diversity in RNA Viruses 208**

- Misincorporation of Nucleotides 208
- Segment Reassortment and RNA Recombination 208
- RNA Editing 212

### **Perspectives 212**

### **References 212**

## **7 Reverse Transcription and Integration 216**

### **Retroviral Reverse Transcription 217**

- Discovery 217
- Impact 217
- The Pathways of Reverse Transcription 218
- General Properties and Structure of Retroviral Reverse Transcriptases 225
- Other Examples of Reverse Transcription 230

### **Retroviral DNA Integration 230**

- IN-Catalyzed Steps in the Integration Process 233
- Integrase Structure and Mechanism 236

### **Hepadnaviral Reverse Transcription 240**

- A DNA Virus with Reverse Transcriptase? 240
- Pathway of Reverse Transcription 242

### **Perspectives 247**

- Comparison of Systems 247

### **References 249**

## **8 Transcription Strategies: DNA Templates 252**

### **Introduction 253**

### **Properties of Cellular Transcription Systems 254**

- Cellular RNA Polymerases That Transcribe Viral DNA 254
- Production of Viral DNA Templates Transcribed by Cellular RNA Polymerases 254
- Transcription by RNA Polymerase II 255

### **Transcription of Viral DNA Templates by the Cellular Machinery Alone 267**

### **Viral Proteins That Regulate Transcription by RNA Polymerase II 268**

- Patterns of Regulation 268
- Autoregulation by the Human Immunodeficiency Virus Type 1 Tat Protein 269
- The Transcriptional Cascades of DNA Viruses 275

<b>A Viral DNA-Dependent RNA Polymerase</b>	<b>291</b>
<b>Transcription of Viral Genes by RNA Polymerase III</b>	<b>293</b>
Transcription of the Adenoviral VA-RNA Genes	293
<b>Unusual Functions of Cellular Transcription Components</b>	<b>294</b>
<b>Inhibition of the Cellular Transcription Machinery in Virus-Infected Cells</b>	<b>294</b>
<b>Perspectives</b>	<b>295</b>
<b>References</b>	<b>296</b>

## **9 Genome Replication Strategies: DNA Viruses 298**

<b>Introduction</b>	<b>299</b>
<b>DNA Synthesis by the Cellular Replication Machinery: Lessons from Simian Virus 40</b>	<b>301</b>
Eukaryotic Replicons	301
Cellular Replication Proteins and Their Functions during Simian Virus 40 DNA Synthesis	303
<b>Mechanisms of Viral DNA Synthesis</b>	<b>310</b>
Priming and Elongation	311
Viral Replication Origins and Their Recognition	316
Viral DNA Synthesis Machinery	322
Resolution and Processing of Viral Replication Products	324
<b>Mechanisms of Exponential Viral DNA Replication</b>	<b>324</b>
Induction of Synthesis of Cellular Replication Proteins by Viral Gene Products	325
Synthesis of Large Sets of Viral Replication Proteins	328
Viral DNA Replication Independent of Cellular Proteins	328
Delayed Synthesis of Virion Structural Proteins	328
Inhibition of Cellular DNA Synthesis	328
Localization of Replicating Viral DNA to Specialized Intracellular Sites	329
<b>Limited Replication of Viral DNA</b>	<b>330</b>
Replication as Part of the Cellular Genome: Integrated Parvoviral DNA	330
Regulation of Replication via Different Viral Origins: Epstein-Barr Virus	330
Controlled and Exponential Replication from a Single Origin: the Papillomaviruses	332
<b>Origins of Genetic Diversity in DNA Viruses</b>	<b>333</b>
Fidelity of Replication by Viral DNA Polymerases	333
Recombination of Viral Genomes	335
<b>Perspectives</b>	<b>337</b>
<b>References</b>	<b>337</b>

## **10 Processing of Viral Pre-mRNA 340**

<b>Introduction</b>	<b>341</b>
<b>Covalent Modification during Viral Pre-mRNA Processing</b>	<b>342</b>
Capping the 5' Ends of Viral mRNA	342
Synthesis of 3' Poly(A) Segments of Viral mRNA	346
Splicing of Viral Pre-mRNA	349
Alternative Splicing of Viral Pre-mRNA	354
Coordination between Polyadenylation and Splicing	358
Editing of Viral mRNAs	358

**Export of RNAs from the Nucleus 362**

The Cellular Export Machinery 362

Export of Viral mRNA 363

**Posttranscriptional Regulation of Viral or Cellular Gene Expression by Viral Proteins 368**

Temporal Control of Viral Gene Expression 368

Inhibition of Cellular mRNA Production by Viral Proteins 370

**Regulation of Turnover of Viral and Cellular mRNAs in the Cytoplasm 372**

Regulation of mRNA Stability by a Viral Protein 374

Regulation of mRNA Stability in Transformation 374

**Perspectives 374**

**References 375**

**11 Control of Translation 378**

**Introduction 379**

**Mechanisms of Eukaryotic Protein Synthesis 380**

General Structure of Eukaryotic mRNA 380

The Translation Machinery 380

Initiation 381

Elongation and Termination 393

**The Diversity of Viral Translation Strategies 394**

Polyprotein Synthesis 394

Leaky Scanning 398

Reinitiation 398

Suppression of Termination 400

Ribosomal Frameshifting 401

Bicistronic mRNAs 402

**Regulation of Translation during Viral Infection 402**

Inhibition of Translation Initiation as a Cellular Defense against Viral Infection 402

Regulation of eIF4F Activity 405

Regulation of Poly(A)-Binding Protein Activity 407

**Perspectives 408**

**References 409**

**12 Intracellular Trafficking 412**

**Introduction 413**

**Assembly within the Nucleus 415**

Import of Viral Proteins for Assembly 415

**Assembly at the Plasma Membrane 417**

Transport of Viral Membrane Proteins to the Plasma Membrane 418

Sorting of Viral Proteins in Polarized Cells 434

Inhibition of Transport of Cellular Proteins by Viral Infection 438

Signal Sequence-Independent Transport of Viral Proteins to the Plasma Membrane 440

**Interactions with Internal Cellular Membranes 442**

Localization of Viral Proteins to Compartments of the Secretory Pathway 443

Localization of Viral Proteins to the Nuclear Membrane 444

**Transport of Viral Genomes to Assembly Sites 444**Transport of Genomic and Pregenomic RNA from the Nucleus  
to the Cytoplasm 445

Transport of Genomes from the Cytoplasm to the Plasma Membrane 446

**Perspectives 447****References 448****I3 Assembly, Exit, and Maturation 450****Introduction 451****Methods of Studying Virus Assembly and Egress 452**

Structural Studies of Virus Particles 452

Visualization of Assembly and Exit by Microscopy 453

Biochemical and Genetic Analysis of Assembly Intermediates 453

Methods Based on Recombinant DNA Technology 454

**Assembly of Protein Shells 454**

Formation of Structural Units 455

Capsid and Nucleocapsid Assembly 459

Self-Assembly and Assisted Assembly Reactions 461

**Selective Packaging of the Viral Genome and Other  
Virion Components 466**

Concerted or Sequential Assembly 466

Recognition and Packaging of the Nucleic Acid Genome 466

Incorporation of Virion Enzymes and other Nonstructural Proteins 473

**Acquisition of an Envelope 474**Sequential Assembly of Internal Components and Budding from a  
Cellular Membrane 474Coordination of the Assembly of Internal Structures with the Acquisition  
of the Envelope 475**Release of Virus Particles 476**

Release of Nonenveloped Viruses 476

Assembly at the Plasma Membrane: Budding of Viral Particles 477

Assembly at Internal Membranes: the Problem of Exocytosis 478

**Maturation of Progeny Virions 483**

Proteolytic Processing of Virion Proteins 483

Other Maturation Reactions 486

**Cell-to-Cell Spread 487****Perspectives 489****References 489****III****Pathogenesis 493****I4 Dissemination, Virulence, and Epidemiology 494****Introduction 495**

Initiating an Infection 496

**Dissemination in the Host 498**

Viral Entry 498

Successful Infections Must Evade Host Defenses 502

Viral Spread 503

Organ Invasion 511  
Tropism 513  
Virus Shedding and Transmission 515

**Viral Virulence 518**

Measuring Viral Virulence 518  
Genetic Determinants of Virulence 518
