Seawulff Provides Fitting End to “Explorations”

The 49 students in “Exploration, Discovery and Empire” are concluding their academic year at sea. “Exploration” students—all but three of whom are in their first year at Evergreen—have studied more than sailing to prepare for their spring expedition. Spring is a culmination for the students, says Faculty Member Byron Youtz, who coordinates the Core Program. “They’re putting into practice the techniques we’ve been studying all year.”

The “Exploration” faculty team of Youtz and Bob Sluss chose a theme that called for exploring the origin and evolution of three major sciences: natural, biological and social. In the fall, the program focused on how Europeans and Americans used these sciences in their exploration of the New World. This spring the focus has narrowed to Puget Sound.

In addition, the program delved into fictional works on exploration. Along with texts on science, such as The Copernican Revolution and The Columbian Exchange, the reading list included such classics as The Odyssey, Canterbury Tales and The Voyage of the Bngle.

Joanna Macy to Visit Campus as Second Unsoeld Fellow

Returning to the United States, Macy entered doctoral studies in comparative religion and social ethics at Syracuse University and earned a Ph.D. for her dissertation on Buddhist philosophy and general systems theory. Her interest in spiritual resources for social change took her to Sri Lanka on a Ford Foundation grant. There, she worked with the Sarvodaya organization, a Buddhist-inspired self-help movement that she describes in Dharma and Development, published in 1983.

Macy’s efforts to stop the proliferation of nuclear weapons and energy exposed her to the psychological obstacles preventing people from acting on their concern for world safety. Drawing on her work in general systems theory, humanistic psychology and her spiritual experiences, she developed a new form of group work. This theory and the methods used in her empowerment work are detailed in Despair and Empowerment in the Nuclear Age, her powerful and lucid book published in 1983.

In her writings and her group work, Macy presents the planetary crisis as an opportunity for collective and individual awakening.

In addition to visiting academic programs at Evergreen, Macy will give a free public lecture on Monday, May 11, at 7:30 p.m. in the Evans Library Lobby. The Unsoeld Seminar honors the memory of Founding Faculty Member Willi Unsoeld by sponsoring campus visits of distinguished speakers who participate in seminars, workshops and lectures. Last year’s Unsoeld Fellow was Roger Fisher, author of Getting to Yes: Negotiating Agreement Without Giving In.

Head Out: Faculty Member Jaime Kooser and an unidentified “Explorations” student scope the passing shoreline for wildlife as the Seawulff heads out Budd Inlet for a cruise north on Puget Sound.
From Shakespeare to Spectroscopy: Evergreen Faculty Research

"Behavioral and Physiological Changes Measured During Vestibular Compensation," conducted by Jim Ott, is a study of how existing cells activate new growth to gather new information. This process, called neuroplasticity, is used in learning and development. Ott and her students are using the vestibular (equilibrium) system of goldfish to explore neuroplasticity by removing the inner ear, which controls the balancing process. Preliminary results show that new activity is found in the vestibular system on the side of the removed ear. The study of the similarities between many neurological events among different systems and organisms, information gathered by Ott's research can be interpreted in the larger sense of all neuromorphic processes, such as cell recovery after a stroke or other nerve trauma.

"Noninvasive Clinical Chemical Analysis Using Far-Visible (FV) Spectroscopy," the research is being conducted with University of Washington Professor Dr. James Callis. They're using far-visible spectroscopy—the study of how light interacts with matter—to identify materials present in a mixture. The potential for far-visible spectroscopy is being reached. For example, the onset of disease is currently determined by costly test-engine routines. Predicting onset numbers by far-visible spectra could be quicker, cheaper and more exact. Likewise, the hit-or-miss hand-sampling of apples for soft cores could be replaced by spectroscopy that would analyze each apple on a conveyor belt. Since human tissues are transparent to FV radiation, spectroscopy could also be used to measure materials in the blood directly through the skin, eliminating slogs, cumbersome tests and the risk and discomfort of venapuncture.

Jovana Brown is studying "Land-use Decisions Regarding Economic Development in Native American Communities." While some Native American leaders maintain development threatens their sovereignty, others argue that development is necessary for economic security. Brown is analyzing the complex legal, political and moral relationships that underlie these issues. Activities include interviews of tribal leaders, developers, and federal and state agency personnel.

"The History of American Families," conducted by Stephanie Coontz, will culminate in a book that offers a new synthesis of family history. To be published by Schocken Press and Verso Press of England, the book will trace the complex changes in family forms, values and functions from colonial days into industrial America. Coontz's research will show that many narratives about family history break down upon closer examination. A sequel will discuss how the role of the family and its personal meaning to its members changed in the 20th Century.

Lee Dougherty is developing new themes about Shakespeare and his works. Dougherty's explorations include a look at Shakespeare's account of the "life-cycle" as presented in "The Rape of Lucrèce"; Shakespeare's religious beliefs; an investigation of Ben Jonson's Timber; or, Discoveries, which contains a long passage that describes Shakespeare's plays; an evaluation of "Apology for Women," a little-known book by Shakespeare's contemporary, William Heale; and a significance of a phrase that appears in both Shakespeare's and Heale's work: "remembrance of things past."

Larry Eickstaedt is studying the "Freshwater Ecology of Pericival Creek," a nearby stream which is being threatened by the creation of an urbanization of the Olympia area. Despite the importance of Pericival Creek as a rearing site for millions of salmon fry, little information is available about Pericival Creek's ecological nature. Working with students, Eickstaedt is identifying the dominant aquatic invertebrates and photographically documenting the flora and fauna. He's also studying the creek's entomology and fish feeding behavior.

"Democracy in Education: Education in Democracy" is an analysis of the Self-Reflective Group (SRG), a teaching mode developed by Don Finkel. The SRG is an artificial classroom group that enables students to learn the principles of group functioning by teaching them how to become participative observers, and to use their own group as a "self-reflective" laboratory for studying such factors as leadership authority and autonomy. Research funds are being used to write essays on SRG's for publication. Conducting SRG's as part of his work with several programs, Finkel says that while the teaching mode has been extremely valuable for most of his students, he is not advocating it as a method for everyone. While interested in the central issue that an SRG raises: what is the difference between power and authority? "To really feel and understand the dynamics of this situation," he says, "is extremely important for democracy."

"A Comparative Study of Local Government, Computing in Japan, and the United States," conducted by Lucie Harrison, examines the cultural differences that affect computer and telecommunications systems in each nation. Harrison, who is conducting decision-making, patterns of communication and cultural values shape the development and use of computing systems. For example, says Harrison, American verbal communication, which is generally explicit and direct, is improved by office automation. However, Japanese communication, involving face-to-face encounters, may benefit from the same automation. Harrison, who is on a faculty exchange in Kobe, Japan, in 1985, will travel to Japan again to produce a series of studies and gather data for several essays.

"Economic and Social Change in a Belizean Village," conducted by Peta Henderson, is a long-term study of dependency and loss in a Mayan-Mestizo community in the northern region of the Central American country of Belize. The community recently made the transition from a subsistence, slash-and-burn culture to sugar cane cash-crop production. Henderson's research has focused on strategies employed in a community of economic vulnerability due to declining commodity prices and the lack of an agricultural base. Next spring, she will travel to Belize to gather life histories of women and document their perceptions and experiences of these changes.

"A Biochemical and Neurophysiological Study of Spreading Depression in Rat Hippocampus" is being conducted by Jeff Kelly, Clyde Barlow and Janet Ott. The team is studying the phe- nomenon of spreading depression (decreased electrolyte level) in the hippocampus, a part of the brain associated with memory. Spreading depression is a good model for studying ischemia because it mimics some of the chief effects of the condition. Ischemia, caused by the obstruction of the flow of arterial blood, is a condition where localized tissues are affected by the deficiency of oxygen. Determining the effects of ischemia at the cellular level may make it possible to counteract these effects when heart attacks, strokes or aneurysms occur. The researchers are monitoring changes during spreading depression to correlate them with biochemical con- tractions thought to be associated with tissue damage.

"Western European Intercultural Education: Implications for American Minorities," conducted by Lowern King, examines education in western Europe where there are large migrant-worker populations. The educational needs of these populations are met by member countries of the Council of Europe, which sets explicit goals for preserving children's cultural identities while enabling them to play meaningful roles in society. King is considering the implications of this educational approach for American minorities. In her research she has, faced an education that continues to be fragmented and fails to consistently acknowledge and utilize cultural diversity. King is interviewing educational policy-makers as well as conducting library research.

Mark Papworth's research, "Development of Methods in Forensic Anthropology," seeks to sharpen the tools of crime-scene investigation in response to the recent increase in serial murders in America. The investigation of newly discovered "old" homicides requires special treatment of human remains and the recovery of greatly altered or obscure trace evidence. He is collecting botanical samples to log seasonal changes, studying insect populations associated with decay of animal matter, and refining methods for reconstructing facial features over cranial skeletons.

"Four Blades of Grase: A Comparative History of the Crop Production Sciences since 1940 in the U.S., U.K. and India," conducted by John Perkins, examines the research programs that have created high-yield agriculture in the three countries. Perkins is particularly interested in how cultural factors have affected the development of knowledge for producing wheat, maize, rice, potatoes, sorghum, cotton and peanuts. He is traveling to India, Great Britain and Washington D.C. to gather information.

**"An Ecohystory of South Puget Sound, Washington," conducted by Tom Rainey**, is based on the premise that all communities are ecological as well as social entities. The history presents the development of communities and the lives of illustrative individuals, but also shows how these lives and communities relate to the environmental systems that sustain them. The study also contributes to the debate between "national perspective" historians, who concentrate on national events in the teaching and writing of American history, and historians who feel that American history must be reconstructed from the local level up.

Paul Sparks reports that his "Explorations in Experimental Photography" involves pushing back self-imposed limits in his use of imagery. He is producing experimental photography that explores ideas and images that surfaced in his work several years ago. The themes revolve around confrontations based on chance encounters arising from mistakes of time and place, manners or gender. The photographs, made with 8 and 16 mm movie cameras used as still cameras, are used as raw material to be reworked with multiple printing techniques, xerography and electronic imaging.

In the summer of 1985, Fred Tabbutt conducted tests at the University of Redding, England, with a pulsed laser that, he says, "causes chemical reactions to occur that we've never been able to see before." Chemical films had qualities that were useful and if they could be reproduced. His "Study of the Multiple Infrared Photon Decomposition of Gaseous Phenylsilane" pursues these questions by studying the gaseous silicon-hydrogen compounds called silanes. While seeking funding to acquire a pulsed laser, Tabbutt is setting up a laboratory to study phenylsilane through pyrolysis, a process that breaks up the compound with heat. The research has significant practical and theoretical applications. Films containing silicon could mean large cost savings in the production of microelectronics for computers and solar energy devices, while learning the mechanism of gas-phase reaction could make the film formation process more predictable.

What was life like for English women 300 years ago? Nancy Taylor's research, entitled "Women in 17th Century English Society as Revealed Through Their Correspondence," looks past the formal works of educated, politically conscious writers of the period to private, unpublished correspondence. An extensive review of letters written between 1600 and 1688 has unearthed information about the role of women in education, health, entertainment, religion and management of household affairs. It has also revealed how women saw themselves in relation to their families and society. Taylor will consult county records and family collections in England and plans on producing a book on the subject.

**"Contemporary Artwork on Native American Themes," conducted by Gail Trembly**, is part of a continuing development of artistic work with a group of contemporary Native American modernists. Trembly is creating sculptures that incorporate fiber, metal and wood in mixed-media designs. In the past, she says, Native American men have been seen as the painters, sculptors and makers of large objects, while Indian women tended to make smaller works that largely overlapped with crafts. Trembly aims to change this by creating much larger works which fit the contemporary art market, while developing Native American themes in the modernist style.

A series of projects exploring Pacific Northwest art and life, conducted by the husband and wife team of Sid White and Pat Matheny-White, will result in three culturally-diverse exhibitions. "The Jews in the Pacific Northwest," Sid White and Pat Matheny-White, will feature photographic images of Northwest Jewish family and community life from the mid-19th Century to the present. "The Peoples of Washington," a proposed Washington State Centennial project, will feature photographs, verbal commentary and demographic charts to portray the state's diverse population. The third exhibit, "New Directions Northwest: Contemporary Native American Art," is already on tour. The exhibit features the work of 14 artists and is documented by a beautiful, full-color catalog produced at Evergreen.

**The Family Independence Program (FIP) is a welfare reform proposal currently being considered by the Washington State Legislature. The proposal calls for increased work incentives and job training. "Like all social programs," says Greg Weeks, "the FIP is based on assumptions." Weeks' research project is evaluating these assumptions through an extensive analysis of data including labor-market information and social and economic indicators. In a nutshell," he says, "I'm examining the structures of poverty and welfare in Washington." Some of his findings have been shared with the Human Services Committee of the House of Representatives. Weeks is collaborating on the research with Russ Lidman, director of the Evergreen-based Washington State Institute on Public Policy.
Reflections on Turning Twenty

by Alice Patience '80

Have you ever celebrated your birthday for a whole week? One day you celebrate with your family (you get lots of presents—socks and stuff), the next day you celebrate with your roommates, then the next night you have a birthday dinner with special friends, and so forth until—finally—you sit back, wash the chocolate ice cream off your chin, smile, and draw up a list of presents—socks and stuff), the next night you have a birthday dinner with special friends, and so forth until—finally—you sit back, wash the chocolate ice cream off your chin, smile, and draw up a list of presents—socks and stuff). The incense filled the room and memories of Evergreen filled my mind and heart as Belmont spoke of what he said. The incense filled the room and memories of Evergreen filled my mind and heart as Belmont spoke of what he said.

Founding Festival—

Tribute to Evergreen's Past, Present and Future

Faculty members who participated in a panel discussion on women's and ethnic issues at Evergreen. Front row (l. to r.): Mary Nelson and Betty Estes; back (l. to r.): Nancy Taylor, Carolyn Dobbs, Betty Kutter and Wini Ingram.

The opening ceremony kicked off the week's activities—receptions, a slide show, panel discussions, various exhibits, an alumni art show, a film festival of alumni work, all topped off by Alumni Day on Saturday with a luncheon and reception, a hilarious musical review by Malcolm Stilson, a banquet and dance.

On Thursday, I attended a noon panel discussion by early women faculty members Nancy Taylor, Mary Nelson, Betty Kutter, Carolyn Dobbs, Betty Estes and Wini Ingram. They told how they were hired after Evergreen's founders realized they had no women on the faculty. Wini gave us a challenge: to abolish sexism, discrimination and, most importantly because it is deeply imbedded in people, racism.

Starting at 9 a.m. on Friday, students, staff and alumni volunteers began turning turns reading the names of each and every person who has graduated from Evergreen—more than 8,000 in all. This honorary Geoduck Roll Call ran out over a PA system across Red Square. For me, one was to catch a glimpse of what it was like for some of the people who were involved in the creation of Evergreen and to see them today. Another present I received was a silver balloon, a 20-year slide-tape whirlwind of Geoduck images and memories produced by Media Services.

There were presents for everyone at Evergreen's birthday party. For me, one was to catch a glimpse of what it was like for some of the people who were involved in the creation of Evergreen and to see them today. Another present I received was a silver balloon, a 20-year slide-tape whirlwind of Geoduck images and memories produced by Media Services. The Olympian.

Members of the alumni panel who discussed life during and after Evergreen (l. to r.): Joe Dear '76, Ann Avery '72 and '82 (MPA), Pat Cole '80, Kay Boyd '76, Greg Logan '76, and Gail Tanaka '74.

Audience gathers in the CAB to watch "Twenty Years of Evergreen," a 20-minute slide-tape whirlwind of Geoduck images and memories produced by Media Services Coordinator Wyatt Cates. Photo by Dick Milligan, The Olympian.
Evelyn's Alumni Association is on the move. This past year has seen the Board of Directors carry on a variety of service and social activities for the college, its students and alumni, as well as take on new projects. Members of the Association's Board represented alumni on the Board of Trustees, the Evergreen State College Foundation Board and the Strategic Planning Council. For the first time, the Association selected for and received funding from the Evergreen State College Foundation for programs. The Foundation also sponsored a workshop for Board members on fundraising for non-profit organizations. Alumni are taking a greater role in the publication of the ReView, as well as working closely with the Office of Development and Information Services on every issue of the ReView this year.

Last fall the Association sponsored a not too large first party for all new students on campus. Another student reception will be held in May for the graduating class. The Association has also provided funding to the Administration Office for outreach to prospective students and high school counselors.

Socializing and networking were high on the priority list this year for Evergreen's alumni. The Association Regional Representatives in New York, San Francisco and Los Angeles hosted receptions with key college staff members in attendance. Other receptions were held in Anchorage, Boston and Seattle. Evergreen's 20-year Founding Festival brought alumni back to campus to enjoy exhibits, an alumni luncheon and an evening alumni meeting.

Upcoming events for alumni will include a Seattle networking breakfast that will be held monthly in the downtown core, starting this spring. The Association's Alumni office, includ- ing electing Board positions, will take place following the annual election process by mail this year. The Alumni Association will be conducting the annual election process by mail this year. The Alumni Association board members circulated feedback forms to see if the Greeners in attendance are satisfied with the election procedures being used. Algebraically we will be able to get a picture of the numbers, occupation, goods and services available with other Greeners, personally or professionally.

Several events Meet for Breakfast, June 4

The long-awaited bounce and cracker networks for Seattle-area Evergreen alumni is finally happening. Instead of the usual frozen sm Lewette or omelet sandwiches associated with most business networks, the first meeting networking for Greeners use a group of long-lost classmates and ideas in the works include a database to list all the Association's volunteer information and an alumni transit program. Stay tuned to the ReView for more information.

The board meets quarterly and its executive committee meets monthly. Please contact Alumni Director of Community and Alumni Relations Karen Connolly at (206) 866-6000, ext. 4192 if you have ideas or comments to share. The Alumni Board wants to hear from you.

Ho Hum, Another Reunion

This is not, yet another reunion, but a gathering of the former students of "Ho Hum." For the uninformed, "Ho Hum" stands for "Ho Hummers"—Evergreen's first year academic program that was totally announced in the morning conversation. Some Greeners were bright and ambitious alums from all walks of life interested in being Board members. New Directors contact those people to see if they are still in town and available if it's still convenient.

The word they got back, spoken as well as written, was "We had a great time, it was wonderful. Make the world a better place to live." Whooping and cheering as he cited statistics whooping and cheering as he cited statistics what 87% of Evergreen's entering freshmen still want to know how they can "help inside the world a better place to live."

For many alumni, the reception provided an opportunity to meet President Joe Vander (for the first time. Clashing stop a stage made from over turned milk crates, Gander soon had the crowd whooping and cheering as he cited statistics showing that 87% of Evergreen's entering freshmen still want to know how they can "help inside the world a better place to live." Evergreen's Vice President Sue Wadhams, Director of Community and Alumni Relations Jerry Wadhams, Alums Charles Hefferson '75 and Pam Harris '81, and Alumni Association Director Christine Koons Baker '81 also took turns to say a few words from the improvised stage. Many of the group's present students were students during Evergreen's early days and everyone corresponded to hear that the college is faring and still being involved in the student-teacher relationship.

Alums mingled throughout the balance of the evening, talking and trading stories and enjoying wine, mints and background music provided by Domi, a former faculty member. Alumni Association board members circulated feedback forms to see if the Greeners in attendance thought the event was worth repeating. The word they got back, spoken as well as written, was "We had a great time, it was wonderful to see old friends and, yes, let's do it again!"

Seattle Reception

Draws a Crowd

On the evening of February 18, the halls of an old Seattle schoolhouse were crowded with graduates of Evergreen, The Northwest School for Arts and Humanities opened its doors to Evergreen Alumni Association and more than 120 alumni who live in the area paid a visit in a chance to seek each other out and find out "What's going on at Evergreen these days?"

On-the-spot interviews with Geoduck filmmakers at the Alumni Film Festival during Founding Festival.

"Evergreen didn't prepare me for the business of filmmaking, but it did give me the chance to do advanced craft work in my field. Now I'm doing independent production, and documentary and sales work. My tip is don't give up the artistic side of your work. Sweep closets at production companies."

Kathryn Ford '82
Seattle, Washington
"One Film"; 4-min., 16 mm film, 1980

"Evergreen had what I wanted. My two loves were clay and media, and I did production pottery with Peggy Dickinson for two years. When Peggy left, I went into media. I've found you've got to be persistent about what you want. And patient. It takes a lot of patience to come up with the end product. It's a long process. Now I run the media department at Lake Washington High School. I'm working with a women-in-video project and I'm also restructuring old films by adding new sounds, cutting them up. I'm a Wyatt Cates!"

Michael Griggs '81
Olympia, Washington
"Trust Me"; 12-min. video, 1989

"I picked Evergreen because it was right in my own backyard. Currently, I'm still struggling as a media consultant. My advice for current students and others in the business: keep your wits. Know what the media community at large wants."

Terry Barkesdale '85
Seattle, Washington
"My Body's Nobody's But Mine"; 25-min. video, 1989

"Evergreen was the only place that would put up with me. They gave me the keys and let me go. If someone tells you no, forget them. Find someone who will tell you yes."

Bruce Vecchietto '77
San Rafael, California
"Legs"; 2-min., 16 mm film, 1977

"I came to Evergreen because I saw some TESC faculty doing a commercial on TV about the accessibility of equipment. These days I work in the optical department at Industrial Light and Magic in Los Angeles. Survival tips? Be prepared for changes all the time. Know your area and hone down those skills. Study the whole spectrum of a given field and then specialize."

Pat Barber '76
Seattle, Washington

"Some friends told me Evergreen was the best toy box in town and I believed them. Evergreen gave me opportunities to teach myself. Since graduating, I've been doing freelance video and film. My advice for surviving is get a real job, one with a steady check until you can do what you really want."

Class of 1973

Kathryn Ford
Seattle, Washington
"One Film"; 4-min., 16 mm film, 1980

Evergreen didn’t prepare me for the business of filmmaking, but it did give me the chance to do advanced craft work in my field. Now I’m doing independent production, and documentary and sales work. My tip is don’t give up the artistic side of your work. Sweep closets at production companies.

By Joan Barker '85

Quick Takes

Janet (Rudine) Yoder, Seattle, WA, has recently been interviewed by National Public Radio about her work as a stamp artist which is part of the International Mail Art Network. Her work, along with many other stamp artists’ work, was featured at the McAlister Memorial Museum in Eugene, OR.

Class of 1974

Nancy J. Berry Cruse and Jon Cruse ’74, Oakland, CA. Jon plans to pursue a doctorate in public health at the University of Massachusetts-Amherst starting this fall. He received his Ph.D. in sociology from the University of California Berkeley in 1986 and has just accepted a faculty position in the sociology department at the University of Massachusetts.

Annette Klopstech, Seattle, WA, has been a staff attorney for the Pop-Up Indian Tribe for the past three years.

Peter May and his wife, Linda Gudmun, are professors at the University of Texas, Fort Worth, TX. They teach and do research in agriculture and economics and would be happy to see any Greensmen who are in the area.

Tim Roberts and Harvey Roberts ’76, O.E.P.A., 14-20 Lexington, KY. Tim has been accepted by the graduate program in counseling psychology at the University of Kentucky. Previously, she worked for Adoption Services of Washington. Harvey is a systems analyst with ALI, Bank and Associates, where he designs, markets and sells software systems for public safety agencies in the U.S. and Bermuda. They have two children, Drew, 8 1/2, and Jordan, 4 1/2.

Bud Newton, Arlington, OR, and his wife, Brook, are the proud parents of a new daughter, Lauren, born on January 2.

Marti and Roy Finger-Brockway ’82, Seattle, WA, Roy is working as a health care policy analyst in the state Department of Labor and Industries after receiving his Masters in Public Administration from the University of Washington in 1986. Marti is in her second year of residency in family medicine at Group Health.

Douglas Chandler, Berkeley, CA, recently returned from Nicaragua where he hauled around 100 pounds of camera equipment he used to shoot an autonomous community there. Marta Nowakowski and Lynn O’Connell ’73, La Grande, OR, were married July 6, 1986, and are applying to be Peace Corps volunteers.

Debra Nystrom, Colorado Springs, CO, has been chosen to fill the position of membership director of the USA Field Hockey Association. As such, she will be responsible for developing and implementing a membership marketing plan.

Kitty and Daniel Preston ’79, Mt. Rainier, WA. Kitty is working on a dissertation in musicology at the Graduate Center, City University of New York. She is also a fellow at the Division of Musical Instruments at the Smithsonian Institute in Washington, D.C., where she is editing a music history course this spring. Daniel is finishing a dissertation in American history at the University of Maryland, where he also teaches.

Class of 1975

Geoffrey Batwell, Berkley, CA, is a visiting assistant professor in Economics and a research associate with the Center for Economic Policy Research at Stanford University. His work includes analysis of the impact of federal insurance policy on the installation of safety systems in nuclear power plants.

Julie Frederick, Seattle, WA, teaches mildly handicapped students in kindergarten through third grade and has completed six months of two-way bilingual programming training.

Ellen Thompson-Green, Corvallis, OR, is working as a handicapped learner consultant at the Linn-Benton Educational Service District.

Daphne Fisher (Smith) Stone, Eugene, OR, has completed her dissertation on equiptment of soil branches in Oregon's Willamette Valley and looks forward to a year of relocation with her two-year-old daughter, Lauren.

Donald Blanchard, Westport, CT, is practicing land use, zoning and environmental law. His daughters, Biana, 3 1/2, and Altina, 1 1/2 keep him busy.

Kent Ferris, Seattle, WA, graduated from the University of Washington and was accepted by the graduate program in counseling psychology at the University of Southern California with honors in 1986. He is currently the executive director of Leadership Tomorrow.

Claudia Brown Hampton, Portland, OR, and her husband, Terry, see the proud parents of Madelyn Elizabeth, born June 10, 1986, Claudia is working part-time as a freelance producer for Oregon Public Broadcasting and is a reporter for KGW TV.

Rod Newton, Ashland, OR, and his wife, Brook, are the proud parents of a new daughter, Lauren, born on January 2.

Annette Klopstech, Seattle, WA, has been a staff attorney for the Pop-Up Indian Tribe for the past three years.

Peter May and his wife, Linda Gudmun, are professors at the University of Texas, Fort Worth, TX. They teach and do research in agriculture and economics and would be happy to see any Greensmen who are in the area.

Tim Roberts and Harvey Roberts ’76, O.E.P.A., 14-20 Lexington, KY. Tim has been accepted by the graduate program in counseling psychology at the University of Kentucky. Super Saturday wouldn't be complete without reunions between good—and maybe long-lost—friends. Super Saturday is on June 6 this year and, as is becoming traditional, Evergreen's Alumni Association will host Greener Gathering for alumni on the same day.

**Alumni Breakfast**
Start off Super Saturday by sharing a healthy and hearty pancake breakfast with friends and family. Nearly 100 graduates lined up for flapjacks flipped by guest chef alumni last year. This year's breakfast will feature hotcakes fresh-off-the-griddle, fruit salad and a lineup of surprise entertainment. The Alumni Breakfast will be held in CAB 110 at 9 a.m., Saturday. The cost will be $2 unless you take advantage of the Alumni GeoBuck on this page, good for $1 flapjack discount. Cut it out and bring it along!

**Annual Meeting**
Immediately following the Alumni Breakfast, the Alumni Association will hold its Annual Meeting. You're already a member if you graduated from Evergreen, and this is your chance to help chart the Association's course for the coming year. Elections to the Association's Board of Directors will be held and nominations from the floor will be accepted (see related story, page 6). The Annual Meeting will take place at 10:30 a.m. in CAB 110 and adjourn by noon. All Evergreen graduates are encouraged to attend.

**Chicken Booth**
The Alumni Barbequed Chicken Booth will again be purveying delicious chicken to the hungry crowds at Super Saturday. This year, the Alumni Association plans to have a new, less smoky chicken booth that will cook more chicken at one time, which means shorter lines. The first chicken should be coming off the grills a little before noon.

The Alumni Chicken Booth is staffed entirely by Evergreen alumni, and all proceeds benefit the Alumni Association. If you'd like to volunteer to cook, pour drinks or help in some other way at the chicken booth, please call Lyle Tribwell '77 at (206) 357-9589.

**Alumni and Friends Lounge**
During Super Saturday, Library 4004, next to the Beer Garden, will be set up as an informal lounge to sip suds, meet with other Greeners, faculty and staff, and watch “Evergreen's First Twenty Years” on video.

**Dance to the Ducks**
The Annual Greener Gathering Dance finishes off Super Saturday in style! Evergreen alumni and their friends can rock the night away to the sounds of that popular Bellingham band, “The Ducks,” from 9 p.m. to 1 a.m., on campus in Library 4300, site of the Super Saturday Beer Garden. The $5 admission charge will include free munchies and help support the Alumni Association. Last year, “The Ducks” packed the place and everybody had a roaring good time.
