

Student Originated Software – Winter 2002

Weekly Assignment – week FIVE

February 4th – February 8th, 2002

Notes: * * * Everyone needs to read an article by next Thursday to prepare for the guest lecture on e-medicine. Article will be posted on the web site this weekend.

Expectations – We expect you to read your Evergreen email at least three times a week.

Project Management has an in-class final next Wednesday.

DBMS has a take-home final due Monday, Feb. 11 (distributed Wednesday, Feb. 6) and a short answer (20 min) in-class exam that same day. If you are joining DBMS 2nd half, you need to take both these, so Judy knows “where you stand”.

Information Architecture – if you are planning on taking IA and are NOT in PM, please attend our lab time on Monday 11 – 12 in the ACC. We will be reviewing Bugzilla – an open source bug tracking system (in desperate need of an interface overhaul). We will be using this system as a case study for assignments. If you cannot make this, please contact me.

All SOS students are invited to attend Monday 11 – 12 to learn how to configure and use *Bugzilla* for tracking bugs on year-long projects. This system has many features and is used in industry.

Monday:

PM

Meets in LH 1 from 10 – 11 and the ACC from 11 - 12

Read Chapters 8 in *On Time Within Budget*

DB

Read Sections 7.1-7.3, 7.4.1. Assignments 3 and 4 due 1pm.
