Assignment

Work in teams of one or two. Use SOS Program Web Site or Bugzilla or (possibly Web Crossings; see me if you want to consider this) as a case study.

Prepare a proposed site map. Include existing and proposed content and functionality. You can represent the results either graphically and/or with a textual outline.

Steps

- 1) Make an inventory of existing content; include page title, *short* description, priority, flag as new or existing, user type and task that it is fulfilling. (One approach is to print sample representations of existing content.)
- 2) Determine which to keep and which to discard
- 3) Brainstorm new content requirements. Include page title, *short* description, priority, flag as new or existing, user type and task that it is fulfilling.
- 4) Determine any new or existing functionality.
- 5) Organize in categories. Consider several different approaches before determining which one works best.
- 6) Capture design in either a graphical layout or an outline form (or both, if you prefer).
