

*Student Originated Software***OO Analysis & Design (OOAD) Case Study Assignment 3**

Fall 2001

*Due Thursday, Oct. 11 (2 p.m.)***Develop the system's initial use cases**

To complete your project assignment for EU-Lease, follow the same general Steps that you were given for the EU-Bid Workshop 3, but using the appropriate sources for EU-Lease.

(Note, however, that the same "refer to" examples from the workshop handouts should be used.)

**Steps**

- (1) **Draw the business workflow (swimlanes diagram) of the new leasing business processing. Identify the activities in the workflow that will receive system support.**
- (2) **Document your understanding of the system scope boundary and the actors that will interact with the system.**
- (3) **Describe the initial set of services ("use cases") provided by the new leasing system to its actors.**
- (4) **Refine the EU-Lease use cases by factoring out common and optional processing.**
