EM HW 3a Tues. 17 April 2007 Griffiths Ch. 8.2 # 5

Froblem 8.5 Consider an infinite parallel-plate capacitor, with the lower plate (at z = -d/2) carrying the charge density $-\sigma$, and the upper plate (at $z=\pm d/2$) carrying the charge density

(a) Determine all nine elements of the stress tensor, in the region between the plates. Display your answer as a 3×3 matrix:

$$\begin{pmatrix}
T_{xx} & T_{xy} & T_{xz} \\
T_{yx} & T_{yy} & T_{yz} \\
T_{zx} & T_{zy} & T_{zz}
\end{pmatrix}$$

(8.19)

Maxwell stress tensor.

$$T_{ij} \equiv \epsilon_0 \left(E_i E_j - \frac{1}{2} \delta_{ij} E^2 \right) + \frac{1}{\mu_0} \left(B_i B_j - \frac{1}{2} \delta_{ij} B^2 \right).$$

are the same $(\delta_{xx} = \delta_{yy} = \delta_{zz} = 1)$ and zero otherwise $(\delta_{xy} = \delta_{xz} = \delta_{yz} = 0)$. Thus $T_{xx} = \frac{1}{2}\epsilon_0(E_x^2 - E_y^2 - E_z^2) + \frac{1}{2\mu_0}(B_x^2 - B_y^2 - B_z^2).$

$$T_{xy} = \epsilon_0(E_x E_y) + \frac{1}{\mu_0}(B_x B_y),$$

$$T_{NN} = \frac{1}{2} \epsilon_0 \left(0 - 0 - \left(\frac{-\nabla}{6\pi} \right)^2 \right) + \frac{1}{2 \mu_0} \left(0 \right) = \frac{\epsilon_0}{2} \frac{\sigma}{\epsilon_0} = \frac{-\sigma}{2\epsilon}$$

$$T_{xy} = G(0,0) + 0 = 0 = T_{yx}$$

(b) Use	Eq. 8.22 to	determine the	force per	unit area on the	e too niste.	Compane Ro	2 51
	 Teles L 		p		- wp paew.	Cornhaic Cd.	. Z.J1

$$(\nabla \cdot \overrightarrow{\mathbf{T}})_{j} = \epsilon_{0} \left[(\nabla \cdot \mathbf{E}) E_{j} + (\mathbf{E} \cdot \nabla) E_{j} - \frac{1}{2} \nabla_{j} E^{2} \right] + \frac{1}{\mu_{0}} \left[(\nabla \cdot \mathbf{B}) B_{j} + (\mathbf{B} \cdot \nabla) B_{j} - \frac{1}{2} \nabla_{j} B^{2} \right]$$

Thus the force per unit volume (Eq. 8.18) can be written in the much simpler form

$$\mathbf{f} = \mathbf{\nabla} \cdot \mathbf{\hat{T}} - \epsilon_0 \mu_0 \frac{\partial \mathbf{S}}{\partial t},\tag{8.21}$$

The total force on the charges in V (Eq. 8.15) is evidently

$$\mathbf{F} = \oint_{\mathcal{S}} \overrightarrow{\mathbf{T}} \cdot d\mathbf{a} - \epsilon_0 \mu_0 \frac{d}{dt} \int_{\mathcal{V}} \mathbf{S} d\tau. \tag{8.22}$$

(c) What is the momentum per unit area, per unit time, crossing the xy plane (or any other plane parallel to that one, between the plates)?
