

Animating Text with Photoshop

1. Create a new file in Photoshop that adheres to DV video dimensions.
 - a. **Go File > New**
 - b. from the dropdown choose Film and Video
 - c. Choose **NTSC DV**
2. Create a layer for each object you want to animate
3. Go **Window > Animation** to open the animation window
4. To animate a layer
 - a. From the animation window click the stop watch next to the property you want to animate
 - b. Move the timeline scrubber to the next point in the timeline
 - c. Change the value of your layer property (if using the position property, use the move tool to move the layer)
 - d. Repeat for each layer and property you want to animate
5. To export to Quicktime choose **File > Export > Render Video**
 - a. You will probably want to review the **Settings** for the video you are about to render
