

Exporting Video from Photoshop

After setting your animation and adjusting the length of your timeline using the **work area bar** go to File > Export > Render Video

Change the name and choose a location to save. Save to the desktop and then copy your files to your program share on the server.

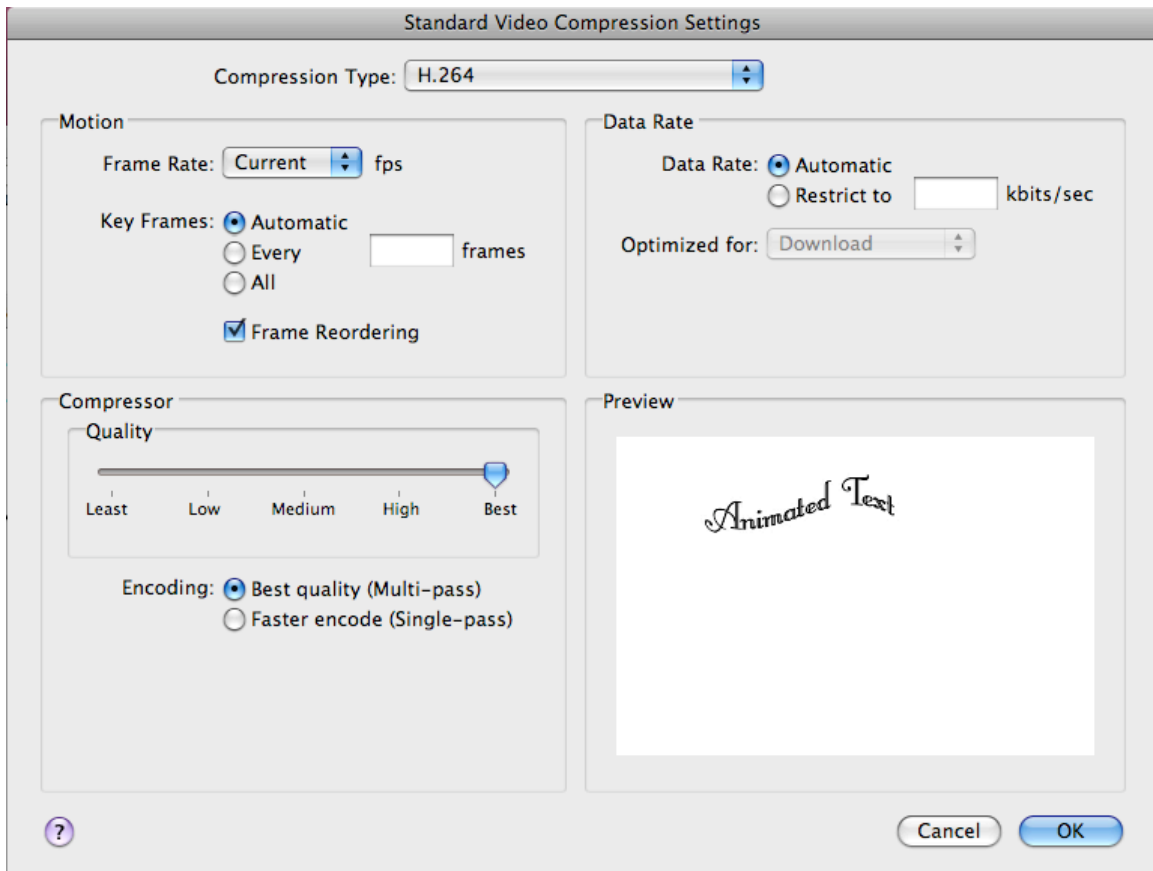

Adjust settings to match this screen:

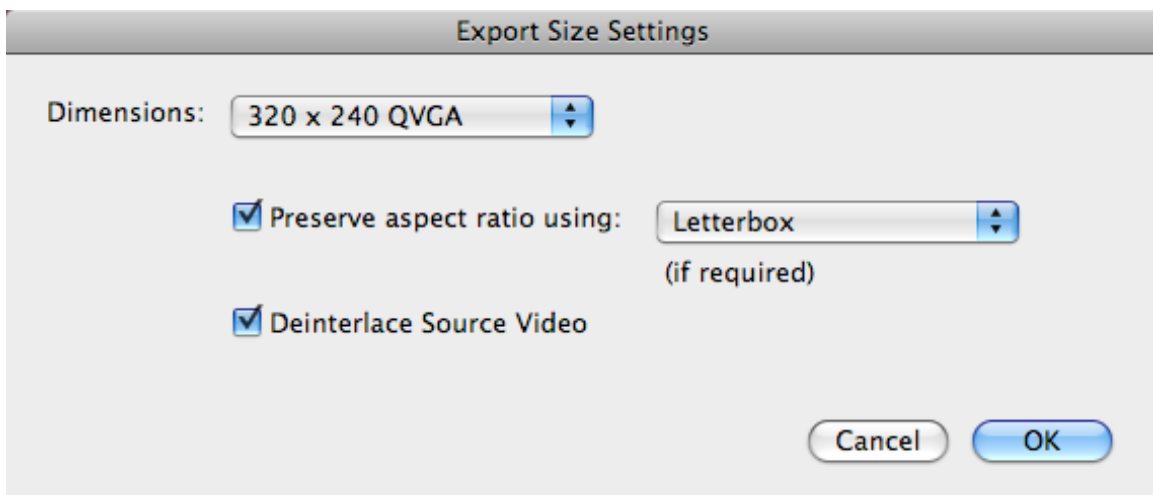

Click on the **Settings** button to the right of Quicktime Movie area

In the dialog box that appears click on the **Video Settings** button

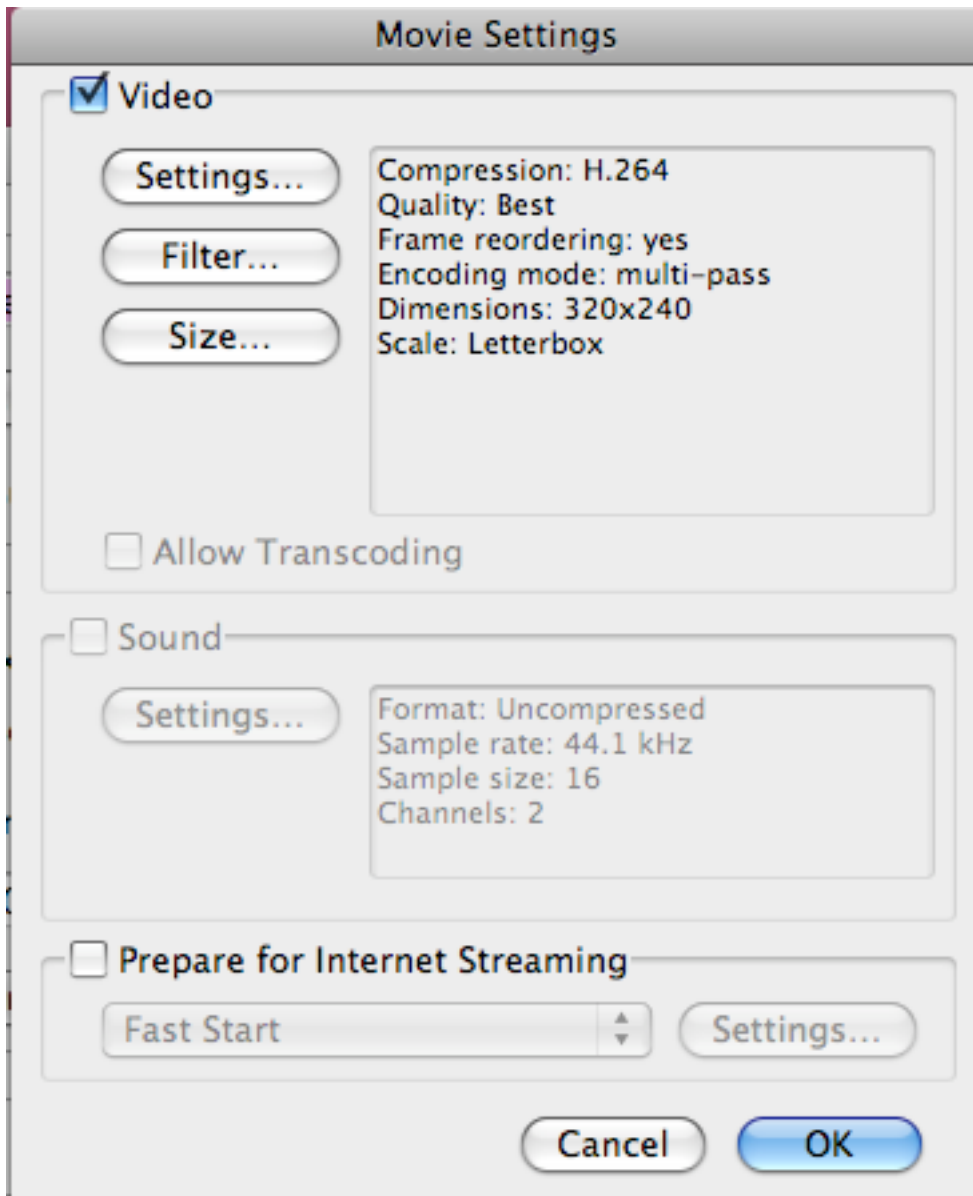

In the **Video Settings** window match this screen:

Back in the **Quicktime Settings** window click on the **Size** button and have your screen match these settings:

The **Quicktime Settings** screen should look like this:

Click okay.

Play and test to confirm everything works,
